Editors of Information Processing and Management

31st August, 2016

To whom it may concern,

I present for consideration the revised version our paper, *Tracking the Diffusion of Named Entities*. It is a collaborative effort, and I am the corresponding author.

This natural language processing paper discusses the emergence and transmission of topics and named entities across communities. It is done over a new data source divided explicitly into communities and presents a toolkit for this task as well as novel results and a rigorously evaluated model for this community diffusion.

We look forward to hearing from you.

Yours faithfully,

Leon Derczynski
